FEATURES

- Waterproof to IP67
- 5/1 watt Switchable Power
- Large LCD
- Private Channel Facility
- Programmable Scan, Priority Scan, Dual and Tri Watch
- All International, US and Canadian Marine VHF Channels
- Weather channels on US and Canadian bands
- Integrated 1700 mAh Lithium Polymer Battery

SUPPLIED WITH

- GX800 Handheld Marine Radio
- Belt Clip
- 240V AC Charger
- Wrist Strap
- High Gain Flexible Antenna
- Instruction Manual

OPTIONAL ACCESSORIES

- MB046 – Belt Clip
- PSK20U – Plug Pack for 9V1A
- AE4024 – Flexible Antenna
- CSGX800 – Cap and Seal
- LS800 – Programming Lead

INTRODUCTION

Congratulations on purchasing this GME fully featured VHF marine radio. Your GX800 has been built to offer excellent value by combining advanced features, great design and manufacturing quality. To ensure you are familiar with the operation and features of your radio, and in order to obtain the best performance, please read this manual thoroughly before operation.

CAUTION

IMPORTANT: READ ALL INSTRUCTIONS carefully and completely before operating your radio and retain this manual for future reference.

To maintain the waterproof integrity of the radio;

- **ENSURE** the antenna and the connector cover are both firmly tightened against the rubber seal (refer to the diagram on page 5).
- **NEVER** attempt to disassemble the radio.

NEVER: connect the radio to a power source other than the supplied battery. This may damage your product.

NEVER: operate your radio with the antenna less than 5 cm from exposed parts of the body.

NEVER: use or charge your radio in a potentially explosive atmosphere.

DO NOT: use your radio with a damaged antenna.

DO NOT: attempt to modify your radio in any way.

ALWAYS: charge your radio at normal room temperature.

ALWAYS: switch off your radio where notices restrict the use of two-way radio or mobile telephones.

AVOID: storing or charging your radio in direct sunlight.

AVOID: storing or using your radio where temperatures are below -20° C or above +60° C.

RF RADIATION INFORMATION

RF RADIATION PROFILE

Your radio is designed and tested to comply with a number of national and international standards and guidelines (listed below) regarding human exposure to radio frequency electromagnetic energy. This radio complies with the IEEE and ICNIRP exposure limits for occupational/controlled RF exposure environment at operating duty factors of up to 50% transmitting and is authorised by the FCC for occupational use only. In terms of measuring RF energy for compliance with the FCC exposure guidelines, your radio radiates measurable RF energy only while it is transmitting (during talking in PTT mode), not when it is receiving (listening) or in standby mode.

The device complies with SAR and/or RF field strength limits of RSS-102 requirements.

RF RADIATION SAFETY

In order to ensure user health, experts from relevant industries including science, engineering, medicine and health work with international organizations to develop standards for safe exposure to RF radiation. These standards consist of:

- United States Federal Communications Commission, Code of Federal Regulations; 47CFR part 2 sub-part J;
- American National Standards Institute (ANSI)/Institute of Electrical and Electronic Engineers (IEEE) C95. 1-1992;
- Institute of Electrical and Electronic Engineers (IEEE) C95. 1-1999;
- International Commission on Non-Ionizing Radiation Protection (ICNIRP) 1998;

FCC Regulations

Federal Communication Commission (FCC) requires that all radio communication products should meet the requirements set forth in the above standards before they can be marketed in the US, and the manufacturer shall post a RF label on the product to inform users of operational instructions, so as to enhance their occupational health against exposure to RF energy.

Part 15 Compliance

This equipment has been tested and found to comply with

the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult your dealer or an experienced radio/TV technician for help.

NOTE: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

EU Regulatory Conformance

As certified by the qualified laboratory, the product is in compliance with the essential requirements and other relevant provisions of the Directive 1999/5/EC. Please note that the above information is applicable to EU countries only.

CE0678

OPERATING RULES

Priorities

- Read all rules and regulations pertaining to priorities and keep an up-to-date copy handy. Safety and distress calls take priority over all others.
- You must monitor Channel 16 when you are not operating on another channel.
- False or fraudulent distress calls are prohibited under law.

Privacy

- Information overheard but not intended for you cannot lawfully be used in any way.
- Indecent or profane language is prohibited.

RADIO LICENCES

Ship Station License

When your craft is equipped with a VHF FM radio, you must have a current radio station licence before using the radio. It is unlawful to operate a ship station which is not licensed. Inquire through your dealer or the appropriate government agency for a Ship-Radiotelephone license. This license includes the call sign which is your craft's identification for radio purposes.

Operators License

A restricted Radiotelephone Operator Permit is the license most often held by small vessel radio operators when a radio is not required for safety purposes. The restricted Radiotelephone Operator Permit must be posted near the radio or be kept with the operator.

Only a licensed radio operator may operate a radio. However, non-licensed individuals may talk over a radio if a licensed operator starts, supervises, ends the call and makes the necessary log entries.

A current copy of the applicable government rules and regulations is only required to be on hand for vessels in which a radio telephone is compulsory. However, even if you are not required to have these on hand it is your responsibility to be thoroughly acquainted with all pertinent rules and regulations.

RANGE

The range of VHF transmissions depends on antenna height, transmitter power and the terrain over which the signals pass. For a 5 watt handheld radio like the TX800, ship to ship communications up to 5 nautical miles should be possible. Using an external antenna should allow ship to ship communication of 8 nautical miles or more. Ship to shore ranges will often be greater due to the increased height of the shore antenna.

CONTROLS

LCD ICONS

KEY FUNCTIONS

KEY	SHORT PRESS	LONG PRESS
HI/LO [LOCK]	TX Power Hi/Low	Key Lock
16	Channel 16	Secondary Priority Channel
DW [TRIW]	Dual Watch Mode	Triple Watch Mode
WX/ALT	Weather Channel	Weather Alert
SCAN	Scan	Priority Scan
MEM	Memory Mode	Save/Delete Memory Channel
Up/ Down	Channel Up/Down	Fast Up/Down
CH/*/UIC	Private Channel	Band Selection
SQL	Squelch Level Setting	

ROTARY CONTROL

Volume	Power On/Off and Adjust Volume
--------	--------------------------------

GENERAL OPERATION

POWER ON/OFF VOLUME CONTROL

Turn the **Volume** control clockwise past the 'click' to turn the radio on. Continue turning the control clockwise to increase the volume.

Turn the control counter-clockwise to reduce the volume. Continue turning the control counter clockwise past the 'click' to turn the radio off.

SQUELCH

To adjust the Squelch, briefly press the **SQL** key. The present Squelch level will flash. Use the  or  keys to adjust the squelch level from 0 (min) to 9 (max).

Press the **SQL** key again to save the new setting.

CHANNEL-SET

The GX800 supports the International, US and Canadian channel sets. When operating outside the US or Canada the International channel-set should be selected.

To select the desired channel-set, press and hold the  key. The radio will beep and the selected channel-set icon will be displayed below the channel display

ICON	CHANNEL SET
	US
	INTERNATIONAL
	CANADA

CHANNEL SELECTION

Briefly press the  key to step upwards one channel or the  key to step downwards one channel. Press and hold the  or  keys to scroll quickly through the channels at a faster rate. When the keys are released the channel scrolling stops.

Weather Channels (US & Canadian Channel Set)

The US NOAA weather channels are available only when

the US or Canadian Channel Sets are selected. Weather channels are not available on the International marine channels. To access the weather channels while on the US or Canadian channel sets, briefly press the  key. The radio will switch to the weather channels and the 'WX' icon will appear. Weather channels are numbered 01 – 10 and are selected using the  or  keys. To return to the normal communications channels briefly press the  key again.

NOTE: Weather channels provide a receive-only weather information service in and around the US and Canada. You cannot transmit on the weather channels.

Weather Alert Function (US & Canada)

When a weather warning is issued in your area the NOAA weather service will transmit a weather alert tone on the local weather channel. If you have enabled the weather alert function on your radio, the reception of this tone will cause a short alarm tone to sound and the radio will automatically tune to the selected weather channel. The weather alert should be detected in all the modes of operation including Standby, Dual and Tri-watch and Scan etc.

To use the Weather Alert Function;

1. Briefly press the  key to select the weather channels. 'WX' is displayed.
2. Use the  or  keys to select the local weather channel that you wish to monitor for alerts.
3. Press and hold the  key to enable the weather alert function. 'ALT' will appear in the lower right of the display.
4. Briefly press the  key again to return to normal operation.

When the weather alert function is enabled the radio will check the selected weather channel every 4 seconds for a weather alert tone. If an alert tone is detected, the radio will sound a short alarm, the 'WX' and 'ALT' icons will flash and the radio will automatically tune to the selected weather channel to allow you to hear the weather warning.

To disable weather alerts, press and hold the  key. The radio will beep and the 'ALT' icon will disappear from the display.

Private Channels

The GX800 can be programmed with private channels for use by organisations that have been officially allocated special frequencies within the VHF Marine band. To access private channels programmed into the radio briefly press the  key then press the  or  keys.

NOTE: This feature is not available to users in Australia and New Zealand. If the  key is pressed, an error beep will be heard and '—' will be displayed. Press the  key again to return to normal operation.

16 KEY

The GX800 supports two priority channels.

PRIORITY CHANNEL 16

To switch to Channel 16, briefly press the  key. All previous functions such as scanning or low power will be cancelled and Hi transmit power will be selected. When  the key is used to select channel 16, 'P' is displayed. Briefly press the  key again to return to the last selected channel or press the  or  keys to switch to the next channel in sequence.

SECOND PRIORITY CHANNEL

To select the second priority channel press and hold the  key. The radio will switch to the second priority channel and 'P' will be displayed.

The second priority channel can be user-programmed to any of the standard marine channels. To program your preferred channel into the second priority channel;

1. Press and hold the  key. The radio will switch to the present second priority channel and 'P' will be displayed
2. Press and hold the  key again. 'P' will disappear and the channel number will flash.
3. Select the required channel using the  or  keys.
4. Press and hold the  key again. The displayed channel will be stored as your new second priority channel.

HI/LO POWER

Briefly press the  key to toggle high or low transmitter power. The display will show 'HI' or 'LOW' to confirm the selected power setting.

NOTE: Some channels may be permanently limited to HI or LOW power by default. If any of these channels are selected you will not be able to change the power setting for that channel. However, for some channels you are allowed to overrule this restriction temporarily – e.g. channels 13 & 67 in the US channel set.

To temporarily select HI power on these channels, hold the **PTT** then hold the  key. The radio will switch to HI power. Now while still holding the  key, release the **PTT** followed by the  key. The channel will stay on HI power for as long as you remain on that channel.

KEY LOCK

Press and hold the  key to lock the keypad. The **Off** icon will be displayed when the keypad is locked and all keys except the **PTT** and any Distress related keys will be locked.

To unlock the keypad, press and hold the  key again. The **Off** icon will disappear.

BACKLIGHT

The backlight operates automatically whenever any key (except the **PTT**) is pressed and switches off a few seconds after the last key press. The backlight provides lighting for the display and keypad.

SCANNING

Basic Scan

The basic scan function allows the radio to scan all channels for signals. When a signal is detected the scan pauses to allow the signal to be heard. Once the signal has gone the scan resumes.

To activate the scan function, briefly press the  key. 'SCAN' appears on the display and the channel numbers change rapidly as the radio scans for signals.

To deactivate the scan function, briefly press the  key again. 'SCAN' disappears from the display.

Priority Scan

Priority scan is similar to the basic scan except it regularly inserts channel 16 into the scan. Signals received on channel 16 have priority over signals received on other channels.

To activate the Priority scan function, press and hold the **SCAN** key. 'PSCAN' appears on the display and the channel numbers change rapidly with channel 16 appearing predominantly in the channel display area.

To deactivate the Priority scan function, briefly press the **SCAN** key. 'PSCAN' disappears from the display.

Memory Scan

Memory Scan allows you to program a select group of channels for scanning.

To Program Memory Channels

1. Use the **▲** or **▼** keys to select the required channel.
2. Press and hold the **MEM** key. The **M** icon appears to the right of the selected channel to confirm the channel is in Memory.
3. Repeat steps 1 and 2 to add further channels to the Scan Memory.

NOTE: Separate Memories can be stored for US, International and Canadian bands.

To Activate the Memory Scan

1. Briefly press the **MEM** key. 'MEM' will appear to the left of the display to confirm the radio is now in Memory mode and the channel display will switch to a Memory channel (only Memory channels are displayed while in Memory mode).
2. Briefly press the **SCAN** key. The radio will begin scanning the Memory channels.
3. To stop scanning; briefly press the **SCAN** key again.
4. To exit the Memory mode, briefly press the **MEM** key. 'MEM' will disappear from the display and the radio will return to the last selected channel.

Reviewing Memory Channels

To quickly determine which channels are stored in the Memory;

1. Briefly press the **MEM** key. 'MEM' will appear to the left of the Channel display.
2. Press the **▲** or **▼** keys to quickly step through the Memory channels. Only channels stored in the Memory will be displayed.
3. To exit from the Memory channels, briefly press the **MEM** key again. 'MEM' will disappear from the display.

NOTE: You cannot add or remove channels from the Memory while in the Memory mode. You must exit the Memory mode first.

DUAL WATCH

The Dual Watch function is a 2 channel scan feature where the radio switches between Channel 16 and any other selected channel. This allows you to monitor a working or club channel while still being able to receive important broadcasts on Channel 16.

To use the Dual Watch function

1. Press the **▲** or **▼** keys to select your preferred working channel.
2. Briefly press the **DW TRIV** key to activate Dual Watch. 'DUALW' will be displayed and the channel number will quickly alternate between 16 and the selected channel.
 - If a signal is received on the selected channel, the Dual Watch will pause to allow the signal to be heard but will continue to monitor channel 16 every 2 seconds resulting in short breaks in the conversation. Once the signal has gone, Dual Watch continues.
 - If a signal appears on channel 16 the radio it will lock onto channel 16 and take priority over any signals on the selected channel.

To cancel Dual Watch, briefly press the **DW TRIV** key.

TRIPLE WATCH

The Triple Watch function is a 3 channel scan feature where the radio switches between Channel 16, a selected channel and the second priority channel. This allows you to monitor 2 channels while still being able to receive important broadcasts on Channel 16.

NOTE: Prior to using Triple Watch ensure you have programmed your second priority channel.

To use the Triple Watch Function

- 1. Press the  or  keys to select your preferred working channel.
- 2. Press and hold the  key to activate Triple Watch. 'TRIW' will be displayed and the channel numbers will quickly switch between 16, the second priority channel and the selected channel.

If a signal is received on either the selected channel or the second priority channel, the Triple Watch will pause to allow the signal to be heard but will continue to monitor channel 16 every 2 seconds resulting in short breaks in the conversation. Once the signal has gone, Triple Watch continues.

If a signal appears on channel 16 it will take priority over any signals on the other two channels.

To cancel Triple Watch, briefly press the  key.

TIME OUT TIMER

The radio has a built-in time out timer that automatically limits transmissions to a maximum of 5 minutes of continuous operation. This feature is required to prevent accidental blocking of the frequency should your **PTT** become jammed or be otherwise pressed accidentally.

When the time out timer activates, the transmission will stop, and the radio will return to receive mode. Normal operation will be restored once the **PTT** is released.

ATIS OPERATION

ATIS stands for Automatic Transmitter Identification System. ATIS is used to identify a ship or vessel that has made a radio transmission. The identity of the vessel is sent digitally each time the radio operator releases the **PTT** after transmitting.

ATIS is generally used in the inland waterways of Europe and is only available when the International channel set is selected.

The use of ATIS requires a unique 9 digit Maritime Mobile Service Identity or MMSI (note that the ATIS MMSI is

completely separate to the MMSI required for the DSC functionality included in DSC compatible radios). Radio operators in Europe who require the ATIS function should obtain their unique ATIS MMSI from their local Maritime Authority.

IMPORTANT: Once the ATIS ID has been programmed into the radio, the ATIS function is enabled and becomes a permanent part of the radio's operation. It cannot be disabled by the user.

Programming the ATIS ID

- 1. Switch the radio Off.
- 2. Hold the  key while switching the radio On. The display will show '1 -' where the left character shows the position of the ATIS digit within the ATIS ID (e.g. position 1 of 9) and the right flashing character shows the currently selected value of the ATIS ID digit at that position.

Eg. for ATIS ID 342985532									
DIGIT POSITION	1	2	3	4	5	6	7	8	9
DIGIT VALUE	3	4	2	9	8	5	5	3	2

3. Press the **▲** or **▼** keys to select the value of the flashing digit (0 – 9).
4. Press the **MEM** key to confirm the selection and move to the next digit.
5. Repeat steps 3 & 4 to enter the entire 9 digit ATIS ID.
6. When the last digit is entered you will be prompted to enter the ATIS ID again (this is to avoid entering an invalid entry).
7. After entering the correct ATIS ID for the second time, the ATIS ID will flash then the radio will revert to normal operation.

NOTE: If the second ATIS entry doesn't match the first, the operation will be cancelled and you will need to start again.

WATER DISPLACEMENT TECHNOLOGY

WDT allows the GX800W to displace any water trapped in the speaker grill which traditionally can be difficult to remove. This is achieved by emitting a loud resonant tone. To activate WDT press and hold the **SCAN** key whilst switching on the GX800W. You will be prompted with a beep tone and the letter 'd' will display. Press **SCAN** to activate WDT and hold the GX800W face down. A loud tone will emit from the speaker for 15 seconds, displacing any water from the speaker grill. When complete the GX800W will resume normal start-up operation. It is recommended to use WDT whenever the GX800W has been submersed in water.

CHARGING THE BATTERY

The battery is a built-in design and is not user serviceable. If the battery requires replacing, the radio should be returned to GME for service to ensure the waterproof integrity of the radio is maintained.

To Charge the Battery

Pull the connector cap on the top panel (between the Volume control and the antenna) to expose the charging socket. Plug the supplied AC adaptor into the 240V power then connect the adaptor's charger plug into the socket on the top of the radio.

While the charger is connected the display will show the battery charging state by animating the battery icon.

IMPORTANT: The connector used to charge the GX800 is a Mini USB type charging at 8V (instead of the customary 5V normally associated with this connector).

For this reason,

- Do not connect your GX800 charger to other mini USB devices as damage may occur to your device.
- Do not remove the warning label fitted to the charging lead on the GX800 charger.

1. PULL CONNECTOR CAP AWAY FROM TOP PANEL

2. PLUG SUPPLIED AC CHARGER INTO SOCKET

Intership channels are for communications between ship stations. Intership communications should be restricted to Channels 6, 8, 72 and 77. If these are not available, the other channels marked for Intership may be used. Channel 70 is used exclusively for Digital Selective Calling (DSC) and is not available for regular voice communications.

NOTES

1. Channel 06 may also be used for communications between ship stations and aircraft engaged in coordinated search and rescue operations. Ship stations should avoid harmful interference to such communications on channel 06 as well as to communications between aircraft stations, ice breakers and assisted ships during ice seasons.
2. Within the European Maritime Area and in Canada, channels 10, 67 and 73 may also be used by the individual administrations concerned for communication between ship stations, aircraft stations and participating land stations engaged in coordinated search and rescue and anti-pollution operations in local areas. Channels 10 or 73 (depending on location) are also used for the broadcast of Marine Safety Information by the Maritime and Coast Guard Agency in the UK only.
3. Channel 13 is designated for use on a worldwide basis as a navigation safety communication channel, primarily for intership navigation safety communications.
4. Channels 15 and 17 may also be used for on-board communications provided the effective radiated power does not exceed 1 watt.
5. The use of Channels 75 and 76 should be restricted to navigation related communication only and all precautions should be taken to avoid harmful interference to channel 16. Transmit power is limited to 1 watt.

US MARINE VHF CHANNELS AND FREQUENCIES

88A	157.425	157.425	X	Commercial, Intership only

Additional Information, Frequencies, and Charts.

Frequencies are in MHz. Modulation is 16KF3E or 16KG3E.

Recreational boaters normally use channels listed as Non-Commercial: 68, 69, 71, 72, 78A.

Channel 70 is used exclusively for Digital Selective Calling (DSC) and is not available for regular voice communications.

Channels 75 and 76 are reserved as guard bands for Channel 16 and are not available for regular voice communications.

Note that the letter A indicates simplex use of the ship station transmit side of an international duplex channel, and that operations are different than international operations on that channel.

NOAA Weather Channels	
WX1	162.550
WX2	162.400
WX3	162.475
WX4	162.425
WX5	162.450
WX6	162.500
WX7	162.525

Channel numbers, e.g. (WX1, WX2) etc. have no special significance but are often designated this way in consumer equipment. Other channel numbering schemes are also prevalent.

The order of channels shown is the order they were established and is slowly becoming less popular over time than a numerical ordering of channels.

See NATIONAL WEATHER SERVICE MARINE PRODUCTS VIA NOAA WEATHER RADIO and the NOAA Weather Radio Homepage for more information.

Some VHF transceivers are equipped with an International – US switch for that purpose. A channels are generally only used in the United States, and use is normally not recognized or allowed outside the US The letter B indicates simplex use of the coast station transmit side of an international duplex channel. The US does not currently use B channels for simplex communications in this band.

Boaters should normally use channels listed as Non-Commercial. Channel 16 is used for calling other stations or for distress alerting. Channel 13 should be used to contact a ship when there is danger of collision. All ships of length 20m or greater are required to guard VHF channel 13, in addition to VHF channel 16, when operating within US territorial waters. Users may be fined by the FCC for improper use of these channels.

SPECIFICATIONS

GENERAL

Frequency Range:	156.025 to 163.275 MHz
Number of Channels:	56 International, 52 US, 59 Canadian, 10 Weather
Oscillator:	PLL
Modulation:	FM
Channel Spacing:	25 kHz
Frequency Stability:	±5 PPM
Standard Operating Temperature:	-20°C ~ +55°C
Nominal Working Voltage:	7.4 V DC (with Li-Polymer battery)
Low Voltage Limit:	6.8 V DC
Battery Life (5% TX, 5% RX, 90% Stby):	≥8 Hrs
Antenna Socket :	SMA
Built in Speaker:	40 mm Diameter, 8 Ohms
Dimensions:	67 (W) x 153 (H) x 43 (D) mm
Weight	297 grams
Battery:	7.4 V 1700 mAh Li-Polymer
DC Charger:	9 V @ 1000 mA
Charging Current:	760 mA ± 130 mA
Waterproof:	IP67

RECEIVER

Sensitivity (12dB SINAD): -119 dBm

Squelch: Threshold: -119 dBm

Tight: -113 dBm to -107 dBm

Rated Audio Output @5% THD Speaker: 250 mW

Adjacent Channel Rejection: ≥ 70 dB

Image Rejection: ≥ 70 dB

Intermodulation Rejection: ≥ 68 dB

Maximum S/N @ 1 mV ≥ 40 dB

Spurious Response rejection (CH16) 80 MHz to 1 GHz ≥ 70 dB

Conducted Spurious Emission: ≤ 70 dB

Scan Time per Channel: 200 ms

RX Current: Standby – 185 mA

Max Audio Power – 380 mA

TRANSMITTER

Output Power: High – 5W

Low – 0.8W

Frequency Tolerance: ± 5 PPM

Max Modulation: ± 5 kHz

Conducted Spurious Emission: ≤ -56 dB

Audio Distortion @ 3 kHz Dev: $< 5\%$

Conducted Spurious Emission: ≤ -56 dB

TX Current: High Power – 1.6 A

Low Power – 0.9 A

STANDARD COMMUNICATIONS CONTRACT WARRANTY AGAINST DEFECTS

This warranty against defects is given by Standard Communications Pty Ltd ACN 000 346 814 (We, us, or GME). Our contact details are set out in clause 2.7. This warranty statement only applies to products purchased in Australia. Please contact your local GME distributor for products sold outside of Australia. Local distributor details at www.gme.net.au/export.

1. Consumer guarantees

1.1 Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

1.2 To the extent we are able; we exclude all other conditions, warranties and obligations which would otherwise be implied.

2. Warranty against defects

2.1 This warranty is in addition to and does not limit, exclude or restrict your rights under the Competition and Consumer Act 2010 (Australia) or any other mandatory protection laws that may apply.

2.2 We warrant our goods to be free from defects in materials and workmanship for the warranty period (see warranty table) from the date of original sale (or another period we agree to in writing). Subject to our obligations under clause 1.2, we will at our option, either repair or replace goods which we are satisfied are defective. We warrant any replacement parts for the remainder of the period of warranty for the goods into which they are incorporated.

2.3 To the extent permitted by law, our sole liability for breach of a condition, warranty or other obligation implied by law is limited.

(a) in the case of goods we supply, to any one of the following as we decide –

(i) the replacement of the goods or the supply of equivalent goods;

(ii) the repair of the goods;

(iii) the cost of repairing the goods or of acquiring equivalent goods;

(b) in the case of services we supply, to any one of the following as we decide –

(i) the supplying of the services again;

(ii) the cost of having the services supplied again.

2.4 For repairs outside the warranty period, we warrant our repairs to be free from defects in materials and workmanship for three months from the date of the original repair. We agree to re-repair or replace (at our option) any materials or workmanship which we are satisfied are defective.

2.5 We warrant that we will perform services with reasonable care and skill and agree to investigate any complaint regarding our services made in good faith. If we are satisfied that the complaint is justified, and as our sole liability to you under this warranty (to the extent permitted at law), we agree to supply those services again at no extra charge to you.

2.6 To make a warranty claim you must before the end of the applicable warranty period (see warranty table), at your own cost, return the goods you allege are defective, provide written details of the defect, and give us an original or copy of the sales invoice or some other evidence showing details of the transaction.

2.7 Send your claim to:

Standard Communications Pty Ltd.
PO Box 96, Winston Hills, NSW 2153, Australia.
Tel: 1300 463 463
Email: servadmin@gme.net.au

2.8 If we determine that your goods are defective, we will pay for the cost of returning the repaired or replaced goods to you, and reimburse you for your reasonable expenses of sending your warranty claim to us.

3. What this warranty does not cover

3.1 This warranty will not apply in relation to:

- (a) goods modified or altered in any way;
- (b) defects and damage caused by use with non Standard Communications products;
- (c) repairs performed other than by our authorised representative;
- (d) defects or damage resulting from misuse, accident, impact or neglect;

(e) goods improperly installed or used in a manner contrary to the relevant instruction manual; or

(f) goods where the serial number has been removed or made illegal.

4. Warranty period

4.1 We provide the following warranty on GME and Kingray products. No repair or replacement during the warranty period will renew or extend the warranty period past the period from original date of purchase.
